

Homework #3
IT Audit checklist on LAN Domain

Inventory and Device Management

- ☐ All network-connected devices (PCs, printers, switches, etc.) are inventoried and documented.
- ☐ Physical security controls are in place for LAN hardware.

User Access Controls

- ☐ Unique login credentials are required for each employee and changed twice per year.
- ☐ Role-Based Access Control is implemented to limit access to only necessary resources.
- ☐ Inactive accounts are disabled and/or removed regularly.

Workstation Security

- ☐ Anti-virus and anti-malware software is installed and up-to-date.
- ☐ USB port access is restricted or monitored.
- ☐ Local file storage is disabled in compliance with PCI DSS (data must not be saved on local machines).

Patch and Update Management

- ☐ Operating systems and applications are updated with the latest security patches.
- ☐ A centralized patch management system is used to deploy updates across the LAN.

Network Configuration and Security

- ☐ Network switches and routers are secured with strong admin passwords.
- ☐ Virtual LANs are used to segment traffic within the LAN.
- ☐ MAC address filtering is enabled where applicable.

Intrusion Detection and Monitoring

- ☐ Network traffic is monitored for unusual or suspicious activity.
- ☐ Logs are generated and stored securely for audit and review.

Homework #3
IT Audit checklist on LAN Domain

Data Transmission Security

- ☐ Data transmitted to/from the cloud server is encrypted using TLS 1.2+.
- ☐ Internal network uses secure protocols (e.g., HTTPS, SFTP) for sensitive transactions.

Physical LAN Infrastructure

- ☐ Server rooms are locked and monitored with restricted access.
- ☐ Cables and hardware are properly labeled and secured.
- ☐ Backup power is in place for all critical LAN components.

Policy and Compliance

- ☐ IT security policies specific to LAN operations are documented and accessible for everyone.
- ☐ Employees receive training on acceptable LAN use and security practices.
- ☐ The company adheres to PCI DSS standards related to LAN configurations.

Incident Response and Recovery

- ☐ A LAN-specific incident response plan exists and is tested regularly.
- ☐ Daily backups are conducted and stored securely offsite or in the cloud.
